NRO REVIEW COMPLETED

2 March 1962

MEMORANDUM FOR THE RECORD

SUBJECT : CORONA Meetings

1. The month of March currently has a number of meetings planned. To assist Headquarters in determining participation and adjust priorities for travel requirements or other commitments, they are as follows:

a. 6-7 March: SETD review of design requirements of the Auxiliary Frame Camera. To be held in Boston with [redacted] representing the SETD. Major Howard said he would probably attend and SETD has requested that I attend at least one day.

b. 13 March: Major Howard has requested a meeting at ACIC in St. Louis with SETD and Boston to discuss the capabilities and possibilities to improve the positioning capability of CORONA material. This will include discussion of stellar applications. There is also a possibility that two of the four existing "horizon cameras" could be re-oriented slightly and replaced with stellar optics. This would still present a problem in ridged orientation with reference to the frame camera and might necessitate using only 30-130 material in that main camera due to the slow speed of 30-132. These items are only mentioned as possible points of discussion; this whole problem is still in a study phase.

c. 14-15 March: Suggested date for a meeting at Philadelphia to discuss schedules. This was promised to G. E. at the time they agreed to increase their deliveries to meet the accelerated launch schedule. One day is probably adequate on this subject. SETD felt at least Major Howard or I should attend.

d. 16 March: If mission 9031 is successful, this date, or one close to this, would be desirable for review of mission at WFO by the cleared team, since the appropriate West Coast people will be in the vicinity. The C.R. should be here by this time.

e. 20 March: Monthly SMC meeting is scheduled in Palo Alto on this date. Project review and status report to the Configuration Control Board.
